INTRODUCTION:

Develop a Name Authenticator and data collector using Graphical User Interface and File Handling in java platform.

ABSTRACT:

Youth Red Cross Club is a worldwide dedicated service Organization majorly made to rescue the human life by providing the blood to the required person at the required time. To do this one of the major prior work to be done is the collection of data. This work is done to empower the youth to be aware of the YRC and to motivate blood donation service mindset and also involving them in the field.

OBJECTIVE OF THE PROJECT:

To learn and enhance the concepts of Graphical User Interface for collecting the User Name Information. To learn the concept of File Handling to store the User Data such as Blood Group, Roll Number, Name of the Department which He / she belongs to, Age and Phone Number.

MOTIVATION:

We are living in a world which drives us to act fast and be at the top of the hill. But due to this there comes riots, wars, guns, missiles that lead to a great loss and looping aggression that is poisonous to the mankind. Also as we humans are limited by various diseases and unfortunate accidents, the demand for blood is in higher scale always nowadays. To meet the demand proper preliminary actions should be done. One among them is this work, which is predominantly done for the data collection for the Youth Red Cross.

PROBLEM STATEMENT:

In data management, redundancy is a major issue, which starts at the period of

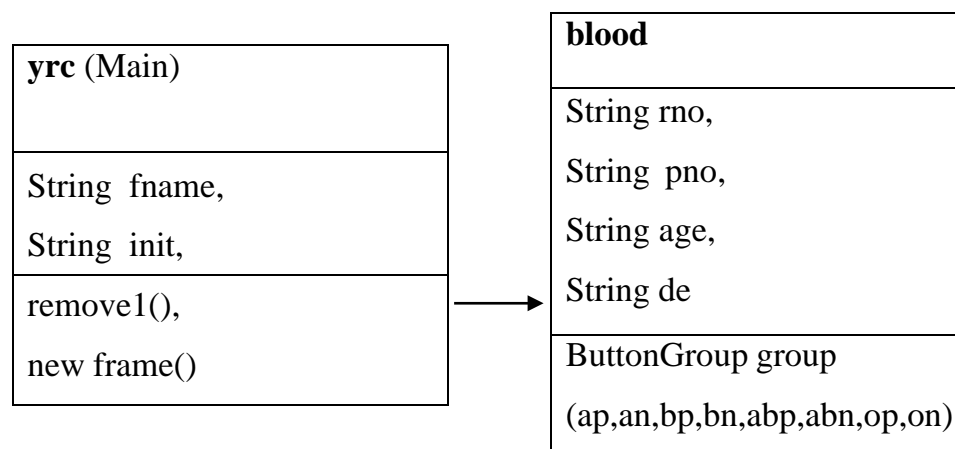

getting information itself. The data may be entered in different field boxes, there may be improper format, missing data in a field which leads to meaningless storage of data.

To avoid this problem we have designed an algorithm for detecting mistakes and explaining the nature to the people.

SYSTEM SPECIFICATION:

Processor with or above dual cores, 128 MB of RAM or above, 2 GB of Storage or above, Any 32-bit or 64-bit Operating System, Java 12 or above with JDK, JVM, JRE installed.

CLASS DIAGRAM:

MAJOR CONCEPTS IMPLEMENTED IN THE PROJECT:

Swing, awt, JOptionPane, Image icon, radio buttons are used for making graphical user interface. File, Filewriter and PrintWriter concepts are used for file handling.

- ♣ File handling
- ♣ Exception Handling
- ♣ Event Handling
- ♣ Graphical User Interface
- ♣ Abstraction
- ♣ Method Overriding

LAST NAME ERROR

Your last name entered wrongly please verify

OK

Information missing error:

The screenshot shows a web application window titled 'YOUTH RED CROSS'. It features a logo on the left and a form with the following fields: ROLL NO. (770CTE15524E), PHONE NO. (88745E1220), DEPARTMENT, and AGE (18). Below the form, there is a 'BLOOD GROUP' section with radio buttons for A+, A-, B+, B-, AB+, AB-, O+, and O-. A note below the radio buttons states: 'Note: After entering all values, select the blood group once again if SUBMITTED SUCCESSFULLY window is not displayed'. An error dialog box is open in the center, titled 'DATA NOT ENTERED ERROR', with a warning icon and the message 'Some information is not Entered, please verify'. The dialog box has an 'OK' button.

Successful submission:

The screenshot shows the same web application window as above, but with different values: ROLL NO. (770CTE15524E), PHONE NO. (88745E1220), DEPARTMENT (EEE), and AGE (18). The 'BLOOD GROUP' section has the 'O-' radio button selected. The same note is present. A success dialog box is open in the center, titled 'SUBMITTED SUCCESSFULLY', with an information icon and the message 'you have selected O negative as your blood group you can now close the application'. The dialog box has an 'OK' button.
